# STYLE AND SIZING SELECTION GUIDE

## YOU DON'T HAVE TO SACRIFICE LOOKS FOR SAFETY.

Sentry is proud to be the first in the industry to offer 20 standard\* architectural colors in AAMA 2604 Powder Coating. This finish utilizes the newest green technology, providing an unmatched performance in durability exceeding all industry standards and is able to match any building facade and window frame colors. All Sentry powder coat window guard products are warranted for life against rust.

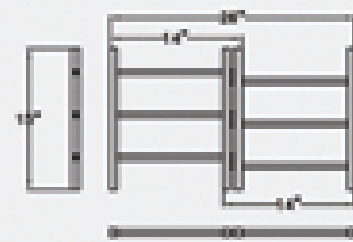

### WHY POWDER COATING IS SENTRY'S CHOICE OF FINISH?

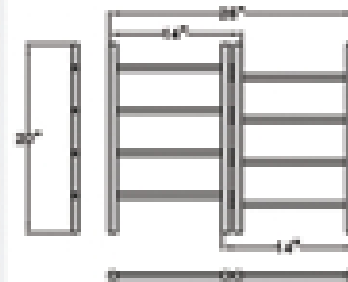

Powder coating is an advanced method of applying a decorative and protective finish to a wide range of materials and products that are used by both industries and consumers. Powder coating is the fastest-growing finishing technology in North America, representing over 10% of all industrial finishing applications. Powder coating gives consumers, businesses, and industry one of the most economical, longest-lasting, and most color-durable quality finishes available.

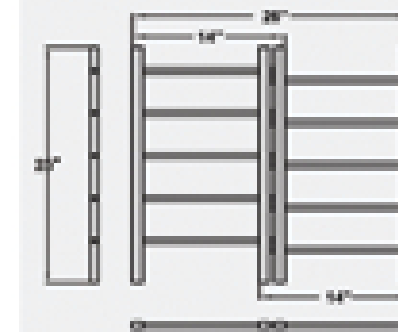

Powder coating is also highly protective of our environment. While liquid finishes contain solvents which have pollutants known as volatile organic compounds (VOC's), powder coating contains no solvents thus, there is no longer a need for finishers to buy costly pollution control equipment. In addition, most powder coating over-spray that does not adhere to the part can be retrieved and reused, virtually eliminating the waste commonly found in liquid finishing processes.
